The five questions you would ask to a data scientist in an interview

- How would you use data science to improve the world?

- What are bad recommendations you hear in data science?

- A hammer and a nail cost $1.10, and the hammer costs one dollar more than the nail. How much does the nail cost?

- Give me an example of a time when you solved an analytically difficult problem.

- Tell me something that's true that almost nobody agrees with you on

- **Bonus:** What's the best question you've ever been asked? What's your answer to it?

E Portfolio

Simplified docs for data science

- Too long; didn't data

Scrapy

- R package to scrape jobs for keywords
- automatically update my adaptive resume
